(b) Each individual chosen in a simple random sample. (c) each individual in the population. (D) a voluntary response sample. (E) A convenience sample. Answer: (C) 4 Question 2: You want to take a simple random sample (srs) of 50 of the 816 students living in a bedroom on campus. You label students 001 to 816 in alphabom order. In the random dealer table, you wipre 95592 94007 69769 33547 72450 16632 81194 14873 The first students of your sample Tâ™ Ruâ (A) 955, 929, 400. (B) 400, 769, 769. (C) 559, 559, 294, 007. (D) 929, 400, 769. (E) 400, 769, 335. Answer: (E) 5 Question 3: A study of angina treatments (painting due to low blood supply for heart E o) compared by surgery, use of angioplasty. The study analyzed the mothers of thousands of angina patients whose moments had chosen one of these treatments. It was found that the time of drug survival data was the highest. What concludes? (A) This study proves that drugs prolong life and should be the treatment of choice. (b) We can conclude that drugs extend life The study was a comparative experience. (C) We can not conclude that drugs prolong life because because ) T. isu koobeca ½ it's not the same J(c) Confusion cannot happen in experiments. (d) An observational study cannot have a response variable. (e) Observational studies cannot use random samples. Answer: (b) 9 Question 7: A TV station wants to get information about the TV viewing habits in its market area. The market area contains a population city of 170,000, another city of 70,000 and four cities of about 5000 inhabitants each. The station suspects that viewing habits may be different in larger and smaller cities and rural areas. Which of the following sampling projects would give the type of information the station requires? (a) A cluster sample using cities and cities as clusters (b) A sample of market area convenience (c) A stratified sample of cities and towns in the market area (d) A stratified sample of cities and towns in the market area (e) An online survey that invites all people from the cities and towns of the market area to participate in the answer: (d) 10 Question 8: the bias in a sampling method is (a) any difference between the sample result and the truth about the population. (b) The difference between the sample result and the truth about the population due to the use of the chance to select a sample. (c) Any difference between the outcome of the sample and the truth about the population due to practical difficulties, such as contacting the selected subjects. (d) Any difference between the sample result and the truth about the population that tends to occur in the same direction whenever you use this sampling method. (e) racism or sexism in those taking the sample. Answer: (d) 11 Question 9: You wonder if the TV ads are more effective when they are longer or more frequently repeated or both. Then you design an experiment. You prepare ads of 30 and 60 seconds for a camera. Education Association (the largest union of teachers in the country) and send a survey to a random sample of 2500 teachers. In all, 1347 of the teachers return the research. Of those who responded, 32% say they favor some kind of national proficiency test. What of the following statements about this situation is true? (a) As random sampling was used, we can feel confident that the percentage of all American high school teachers who would say they favor a national proficiency test is close to 32%. (b) We cannot trust these results because the search was sent by mail. Only the results of the survey of face interviews are considered valid. (c) As more than half of those who have received the submission of the survey have actually responded, we can feel quite confident that the actual percentage of all American high school teachers who would say they favor a national test of proficiency is close to 32%. (d) The results of this research can be affected by the non-response bias. (e) The results of this survey cannot be trusted due to voluntary response bias. Answer: (d) 14 Free Response Section 15 Question 1: Elephants sometimes damage the trees in Africa. Turns out elephants don't like bees. They recognize the hills in areas where they are common and avoid them. Can this be used to keep the elephants away from the trees? Is the harm of elephants smaller in trees with hives? Will even empty hives keep the elephants away? Researchers wish to design an experiment to answer these questions using 72 acacia trees. (a) Identify the experimental units, treatments and response variable. (b) Describe how researchers can perform a completely randomized design for this experiment. Include a description of how treatments should be16 Question 2: An article from the New York Times on Public Opinion Opinion about the use of baseball has discussed the results of a sample search. The survey found that 34% of adults think that at least half of Major League Baseball (MLB) players (MLB) ortuo o etnaruD .aid mu me otiejus esse rop adiregni etnemlamron anÆfac ed edaditnaug a odnetnoc aluspjÆc amu ubeecer otiejus adac ,said 2 ed sodoÆrep sod mu etnaruD .olavretni ed anames amu moc marerroc euq said siod ed sodoÆrep siod me odazilaer iof otnemirepxe O .anÆfac ed adariter ed otnemirepxe mu ed rapicitrapp a sotsopsil mavatse euq e anÆfac ed setnedneped soirjÆtnulov 11 maraturcer serodasiugsep sO .anÆfac ed siautibah sedaditnaug saus riregni ed merarap es acisAf aicnªÁntsba ed samotnis refos medop said so sodot anÆfac ed sedaditnaug sednary mamot euq saossep sa euq adrocnoc satsilaicæpse sod airoiam A .etnaregirfer mu uo ©Æfac ed anÆfac ed euqohe mu moc aid o maªAemoc saossep satuM :3 atnugreP 71 .artsoma ed asiugsep atsen sªAv oa ravel edop oEªÅarevoebus a omoc euqilpxE (c) ªasiugsep A rednopsr arap ailªAmf adac me etnemairotæala odilhocse iof otluda mu euq rof ))(.selpnis airªAæala artsoma amu iof oEªAn asiugsep atsen odasu megartsoma ed odotªAm o euq rop euqilpxE jaf .asiugsep ad odatsivertne o res arap oirªAæala otnemiecorp mu rop odangised iof otluda mu ail-ªAmf adac mE .sodatsil oEªAn e sodatsil soremªAn a osseca o odnitinrep ,otelpmoc enofelet ed oremªAn mu ramof arap soirªAæala sotigAd sodanoicida marof .acort adac mE .oEªÅalupop aus A etnemlanoircoprop adatneserper essivtse sªAp od oEªiuger adac euq ritnarag arap sadilhocse marof sacort 6A .sªAp o odot me savita siaicndiser sacort 000.24 ed siam ed atsil amu ed ritrap a rodaturpmoc mu rop etnemairotæala adanoiceles iof adamahc enofelet ed soremªAn ed artsoma a ... -ã eªA .sodinU sodatsE son sotluda 760.1 moc oªAram ed 81 a 51 ed sadazilaer enofelet rop satsivertne me adaesab ©ªA swen SBC/semiT kroY weN od asiugsep etnecr siam a :aadazilaer iof asiugsep a omocªA erbos semiT o oEªÅAaralced ad etrap zaf iugªA .oEªAniipo mahnit oEªAn %8 ,sediªAretse masu BLM ad serodagoj sod otraug mu ed acree euq marasnep %63 sortuO .oitªAlta ohnepsened ues rarohlem arap sediªAretsE From study, the subjects received placebo. The order in which each subject received the two types of heights was randomized. The diets of the subjects were During each of the study of study. At the end of each 2 -day study period, the subjects were evaluated using a tapping task in which they were instructed to press a 200 -faster button than they could. (a) How and why was the lock used in the design of this experience? (b) Why did the researchers random the order in which the subjects received the two treatments? (C) Could this experience have been performed double? Explain. Explain.
